Executive Summary

Supply: The availability of secured credit to households increased in Q1 2019 and was expected to increase in the next quarter. Improving economic outlook was the major factor for the increase in secured credit.

Lenders reported that the availability of unsecured credit to households increased in Q1 2019, but it is expected to contract in Q2 2019. Most lenders adduced higher appetite for risk for this increase.

The overall availability of credit to the corporate sector increased in Q1 2019 and was expected to increase in the next quarter. Market share objectives was the major factor contributing to the increase.

Demand: Demand for secured lending for house purchase decreased in Q1 2019, but more lenders expect demand for secured lending to increase in the next quarter. The proportion of loan applications approved increased even though lenders tightened the credit scoring criteria.

Demand for total unsecured lending from households increased in Q1 2019, and was expected to increase in the next quarter. Despite lenders' resolve to leave the credit scoring criteria unchanged, the proportion of approved unsecured loan applications decreased in the current quarter but is expected to increase in the next quarter.

Lenders reported increased demand for corporate credit from all firm sizes in Q1 2019. They also expect increased demand from all firm sizes in the next quarter.

Defaults: Secured loan performance, as measured by default rates, improved in the review quarter, and lenders still expect lower default rates in the next quarter.

Total unsecured loan performance to households, as measured by default rates, deteriorated in Q1 2019 but is expected to improve in the next quarter.

Corporate loan performance improved across all sizes of firm in the current quarter. Lenders generally expect lower default rates for all firm sizes in the next quarter.

Loan pricing: Lenders reported that the overall spreads on secured lending rates on approved new loans to households relative to MPR remained unchanged in Q1 2019, and was expected to narrow in the next quarter.

The overall spreads on unsecured lending widened in Q1 2019 but were expected to remain unchanged in the next quarter.

Changes in spreads between bank rates and MPR on approved new loan applications narrowed for all business sizes in Q1 2019, but was expected to widen for all firm sizes in the next quarter.

Credit Conditions Survey Report

1.0 Introduction

Part of the Central Bank of Nigeria's (CBN) mandate is to nurture an efficient monetary and financial system in order to promote macroeconomic stability in Nigeria. To achieve this, the Bank needs to, among others, understand trends and developments in credit conditions. This quarterly survey of bank lenders is an input to this work. Lenders were asked about trends and developments in credit conditions in Q1 and Q2 2019. The survey covers secured and unsecured lending to households, lending to public non-financial corporations (PNFCs), small businesses and other nonfinancial corporations (OFCs). This survey serves as an input into the Monetary Policy document, which presents the Bank's assessment of the latest trends in lending to the Nigerian economy.

This report presents the results of the Q1 2019, survey which was conducted from February 25 to March 1, 2019. The results are based on lenders' own responses to the survey, and do not necessarily reflect the Bank's views on credit conditions. To calculate aggregate results, each lender is assigned a score based on their response. Lenders who report that credit conditions have changed "a lot" are assigned twice the score of those who report that conditions have change "a little". These scores are then weighted by lenders' market shares. The results are analyzed by calculating net percentage balances — the difference between the weighted balance of lenders reporting that demand was higher versus lower or terms and conditions were tighter versus loosened. The net percentage balances are scaled to lie between ±100.

The Q1 2019 credit condition survey for households, small businesses and corporate entities indicated an increase in availability of secured credit to households and corporate entities, and increased availability of unsecured credit to households. Spreads on overall secured lending to household, as well as on secured lending to corporates, remained unchanged in Q1 2019. Lenders reported that demand for total unsecured lending from households increased in the current quarter, and was expected to increase in the next quarter. Demand for corporate lending increased across all firm sizes except for OFCs in the review quarter.

2.0 Secured lending to households

In Q1 2019 relative to Q4 2018, lenders reported an increase in the availability of secured credit to households. Higher appetite for risk and improving economic outlook were major factors behind the increase. Availability of secured credit was expected to increase in Q2 2019 as well, with improving economic outlook and market share objectives as the likely contributory factors (Figs. 2.1 and 2.2).

Lenders tightened credit scoring criteria in Q1 2019, and therefore the proportion of loan applications approved in the quarter decreased. Lenders expect to leave unchanged the credit scoring criteria in the next quarter, yet expect an increase in the proportion of approved households' loan applications in Q2 2019.

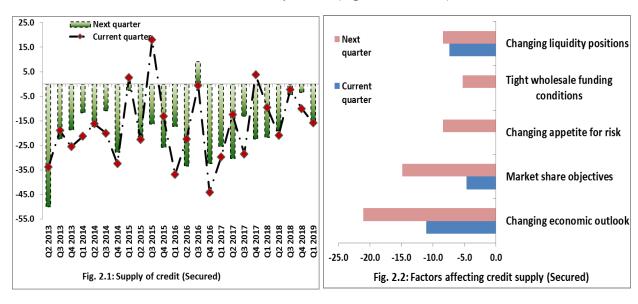

Maximum Loan to Value (LTV) ratios remained unchanged in Q1 2019 but were expected to decrease in the next quarter. Lenders were unwilling to lend at low LTV ratios (75% or less) in Q 2019, but expressed willingness for the next quarter. Similarly, they expressed reluctance to lend at high LTV (more than 75%) in the current quarter, but expressed willingness for Q2 2019. The average credit quality on new secured lending improved in Q1 2019 and was expected to also improve in Q2 2019.

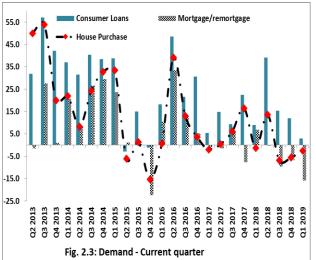

Lenders reported that the overall spreads on secured lending rates to households relative to MPR remained unchanged in Q1 2019, but was expected to narrow in the next quarter. Spreads for all lending types remained unchanged in Q1 2019, but were anticipated to narrow in the next quarter (Fig. 2.7).

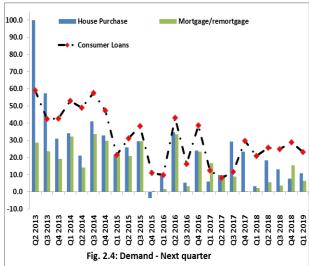

Households demand for lending for house purchase decreased in Q1 2019 but was expected to increase in the next quarter. For the current quarter, households demand for prime lending, buy to let lending and demand for other lending decreased. They were, however, expected to increase in Q2 2019 (Figs. 2.3 and 2.4).

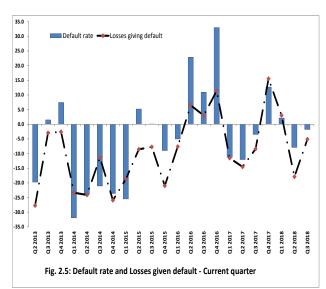

Households demand for consumer loans rose in the current quarter and is expected to rise in the next quarter. Demand for mortgage/remortgaging from households fell in Q1 2019 but is expected to rise in Q2 2019.

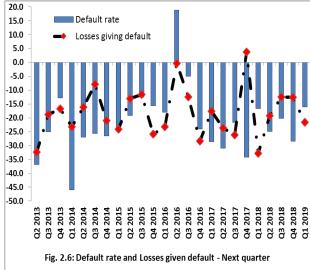

Secured loan performance, as measured by default rates, improved in Q1 2019 and is expected to improve in Q2 2019. Similarly, bank lenders reported lower losses given default by households in both the current and next quarters (Figs. 2.5 and 2.6).

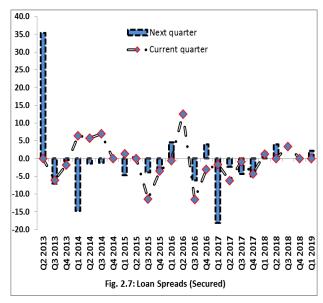

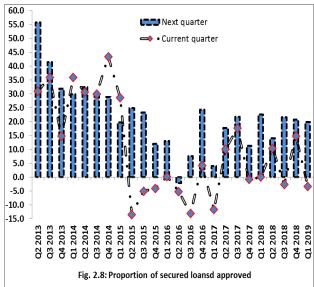

3.0 Unsecured lending to households

The availability of unsecured credit provided to households rose in Q1 2019 but is expected to fall in the next quarter. Lenders reported higher appetite for risk and market share objectives as the major factors that contributed to the increase in Q1 2019 (Figs. 3.1 and 3.2).

Despite lenders' resolve to leave the credit scoring criteria for unsecured loan applications unchanged, the proportion of approved loan applications for households decreased in Q1 2019. Lenders expect to leave unchanged the credit scoring criteria Q2 2019, but anticipate an increase in the total loan applications to be approved in Q2 2019.

The proportion of approved credit card loans decreased in Q1 2019 despite lenders' stance on the credit scoring criteria for granting credit card loans. Similarly, the proportion of approved overdraft/personal loans applications decreased (Fig. 3.8).

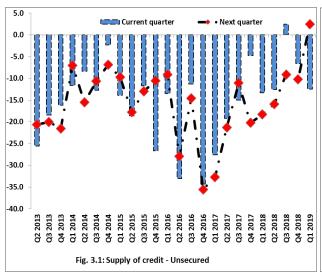

Lenders reported that spreads on credit card lending remained unchanged in Q1 2019 and were expected to remain unchanged in the next quarter. Spreads on unsecured approved overdrafts/personal loans applications widened in the current quarter but were expected to remain unchanged in the next quarter. Spreads on overall unsecured lending remained unchanged in the current quarter, and was expected to remain unchanged in the next quarter (Fig. 3.7)

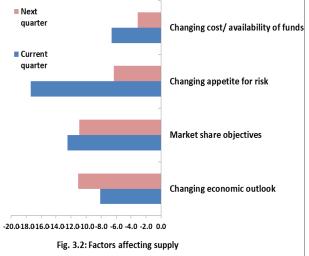

The limit on unsecured credit cards on approved new loan applications remained unchanged in Q1 2019 and was expected to remain the same in the next quarter. The minimum proportion of credit card balances to be paid on approved new loan applications remined unchanged in the review quarter, but was expected to increase in the next quarter.

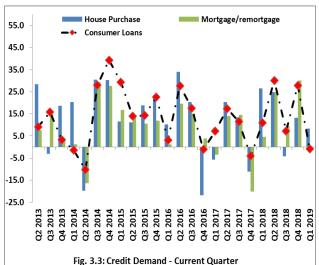

Maximum maturities on approved unsecured new loan applications shortened in the current quarter, but lenders anticipated that they will lengthen in the next quarter.

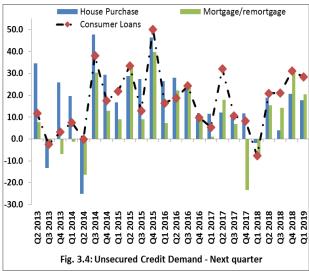

Demand for unsecured credit card lending from households increased in Q1 2019 and was expected to increase in Q2 2019. However, demand for unsecured overdraft/personal loans from households decreased in Q1 2019 but was expected to increase in Q2 2019 (Figs. 3.3 and 3.4).

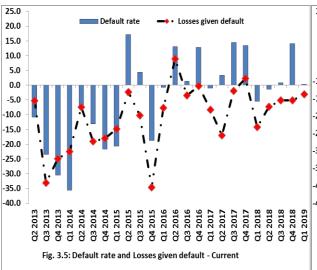

Lenders experienced lower default rates on credit card and on overdrafts/personal lending to households in the current quarter. They expect improvement in default rates in the next quarter for all loan types. Losses given default on total unsecured loans to households and overdraft/personal loans to households improved in Q1 2019 and were expected to improve in the next quarter (Figs. 3.5 and 3.6).

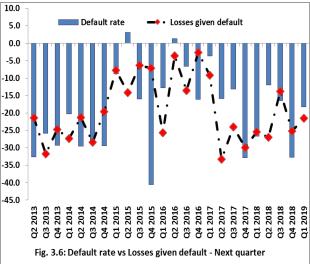

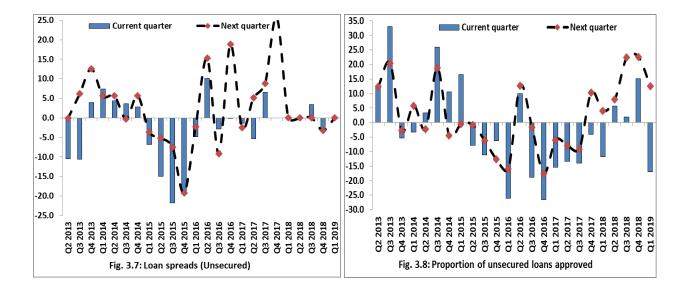

4.0 Lending to corporates and small businesses

Credit conditions in the corporate sector vary by size of the business. The survey asked lenders to report developments in the corporate sector by large and medium-size PNFCs, OFCs and small businesses¹.

The overall availability of credit to the corporate sector increased in Q1 2019 and was expected to increase in Q2 2019. This was driven by market share objectives, favourable economic conditions, market pressures from capital markets, changing appetite for risk and changing sector-specific risks. Lenders reported that the prevailing commercial property prices negatively influenced credit availability of the commercial real estate sector in the current quarter. However, lenders expect the prevailing commercial property prices to positively influence secured lending to PNFCs in the current quarter.

Availability of credit increased for all business sizes in Q1 2019. Lenders expect the same trend in the next quarter (Fig. 4.1).

Spreads between bank rates and MPR on approved new loan applications narrowed for all business in Q1 2019, but were expected to widen for all business sizes in Q1 2019 (Figs. 4.7 and 4.8).

The proportion of loan applications approved for all business sizes increased in the current quarter, and are expected to further increase in Q2 2019.

¹ Small businesses are defined as those with an annual turnover of under ₦5 million. Medium-size corporates are defined as those with an annual turnover of between ₦5 million and ₦100 million. Large corporates are defined as those with an annual turnover of more than ₦100 million

Lenders required stronger loan covenants from all firm sized businesses in Q1 2019. However, they reported that they would require stronger loan covenants for all firm sized businesses except for small business, which they plan to leave unchanged, in the next quarter. For the current quarter, fees/commissions on approved new loan applications fell for all firm sized businesses except for small business; while for Q2 2019 lenders expect fees/commissions on approved new loan applications to fall for all firm sized businesses except for OFCs.

All firm sized businesses benefitted from an increase in maximum credit lines on approved new loan applications in Q1 2019, except for OFCs. Similarly, all firm sized businesses are expected to benefit from an increase in maximum credit lines on approved new loan applications in Q2 2019.

More collateral requirements were demanded from all firm sizes on approved new loan application in Q1 2019. Similarly, lenders will demand for more collateral from all firm sizes in the next quarter.

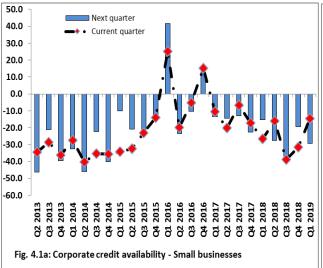

Demand for corporate lending increased for all business sizes in the current quarter, and was expected to increase for all business sizes in the next quarter. The most significant factors that influenced demand for lending in the review quarter were the increase in inventory finance and capital investment, and they were expected to remain the main drivers in the next quarter (Figs. 4.3 and 4.4).

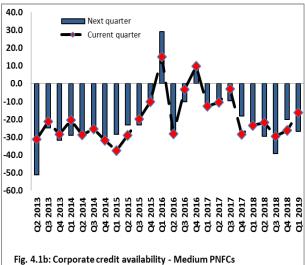

Corporate loan performance as measured by the default rates improved for small businesses and large PNFCs. Lenders still expect lower default rates on lending to all sized businesses in the next quarter (Figs. 4.5 and 4.6).

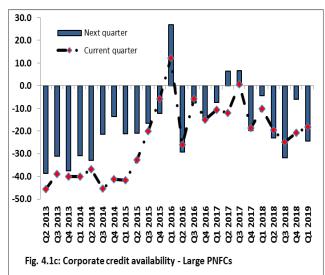

The average credit quality on newly arranged PNFCs borrowing facilities improved for both quarters. The target hold levels² associated with corporate lending improved in the current quarter and was expected to improve further in Q2 2019. Loan tenors on new corporate loans improved in Q1 2019 and were expected to improve further in the next quarter. Draw down on committed lines by PNFCs improved in the current quarter, and is expected to improve in the next quarter.

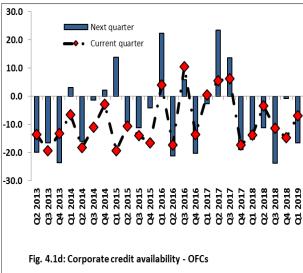

_

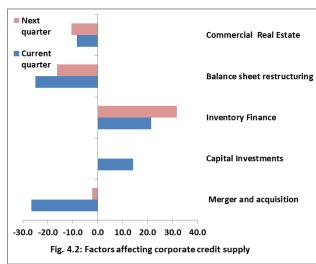

² Share of risks that lenders wish to hold of deals that they underwrite in the short term
